PROJECT TOPIC

Performance Evaluation of CPU Scheduling Algorithms

1. First-Come First-Served (FCFS) – Non-Preemptive
2. Round Robin (RR) – Preemptive
3. Shortest-Job-First (SJF) – Non-Preemptive
4. Shortest-Remaining-Time-First (SRTF) – Preemptive
5. Priority Scheduling – Non-Preemptive
6. Priority Scheduling – Preemptive

Students form groups such that each student in the group must implement one CPU algorithm from the suggested list of CPU scheduling algorithms. For example, if your group consists of three students then you can choose only three CPU algorithms from the above list, and if your group consists of four students then you can choose only four CPU algorithms from the above list.

As a group, you must compare the implemented CPU scheduling algorithms in terms of *average turnaround time* and *average waiting time*. To present your obtained results you may present them as figures or as tables.

Also, to implement your algorithms, each group must choose one programming language or tool. As a group, you are free to choose any programming language or tool to implement your algorithms.

REPORT CONTENT AND STYLE GUIDE

- **Format:** 5 to 10 pages (Excluding: title page, table of contents, and references), typewritten, double-spaced, 1-inch margins, font size 10–12 points.
- **References:** Minimum of two references. These references could be from journals, conferences, reports, books, or URL addresses.
- **Organization:** The report should consist of the following:
  1) Title page contains Project Title, Students' Names, Students' Numbers, and Students' emails.
  2) Table of Contents page.
  3) Body of the report contains an Introduction; Methodology (Algorithms), Results (Figures/Tables), and Conclusions.
  4) References.

SUBMISSION & PROJECT MATERIALS

You must submit the following using the submit link in your section e-learning page. Put the following inside a folder and submit it as a compressed file:

- Your final report in both MS Word and PDF file formats.
- Your program (code) with a read-me file to show the steps of running your program.
